Hi, Chris:

I promised to write something brief about user stories for inclusion in the recommendations. Here's my first cut at it:

Developing user stories is an essential part of an agile development process. We recommend that the development team create user stories for each of the situations representing voter activities. These user stories include, among others:

- 1) a registered voter voting at an assigned precinct on election day;
- 2) a registered voter voting at a voting center;
- 3) a registered voter voting remotely and mailing in a marked ballot, and;
- 4) a disabled registered voter in need of special accommodation (several types).

In following an agile development process, the implementation team would typically handle each user story within a sprint.
